DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 11-15, drawn to methods of screening for bioactive agents capable of modulating the amino acid sequence of SEQ ID NO: 2, encoded by SEQ ID NO: 1, classified in class 435, subclass 7.8.
- II. Claims 6-10, 16-20, drawn to methods of screening for bioactive agents capable of modulating the amino acid sequence of SEQ ID NO: 4, encoded by SEQ ID NO: 3, classified in class 435, subclass 7.8.
- III. Claims 21-23, drawn to a method of screening for agents capable of modulating lymphocyte activation, classified in class 435, subclass 375.
- IV. Claims 24-27, drawn to a method of screening for agents capable of modulating lymphocyte activation, classified in class 435, subclass 375.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are independent and distinct, each from the other, because the methods are practiced with materially different starting materials, have materially different process steps, and are for materially different purposes. Groups I and II are independent and distinct, because the methods are practiced with different nucleic acids encoding different protein, as evidenced by the differing sequences. Groups III and IV are independent and distinct because they are practiced with different nucleic acids encoding proteins with differing structures, as shown by the distinct sequences. The method of Group I is independent and distinct from the method of Group III because the methods have different method steps. Group I is directed to measurement

of ubiquitination of a target protein, while Group III is directed to measurement of lymphocyte activation. The method of Group II is independent and distinct from the method of Group IV because the methods have different method steps. Group II is directed to measurement of ubiquitination of a target protein, while Group IV is directed to measurement of lymphocyte activation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
